

MIST- MEDICAL INSTITUTE FOR SCREENING TEST

MICROBIOLOGY SUBJECT WISE TEST DATED ON 14TH MAY 2026

QUESTIONS

- Q1. Newborn with hydrocephalus, intracerebral calcification and torchlight chorioretinitis was admitted in NICU. The mother was having a pet :
- Cat
 - Dog
 - Parrot
 - Rabbit
- Q2. 25-year-old with painless swelling of scrotum due to collection of fluid between parietal and visceral layers of tunica vaginalis. Capillary blood collected at 8 pm will reveal ?
- Amoebic trophozoite
 - Amastigote
 - Microfilaria
 - Oocyst
- Q3. 19-year-old snake charmer was brought with a history of snake bite at AIIMS New Delhi. All are responsibilities of the hospital except:
- Raise MLC
 - Inform police
 - Notify Government of India
 - Written informed consent before giving antivenom
- Q4. 44-year-old with low grade evening fever, weight loss and night sweats. Spot and early morning sputum were tested through CBNAAT. Report of the test are based on:
- Visualization of acid fast bacilli
 - Detection of DNA of bacteria
 - Detection of bacteria specific antigen
 - Growth of bacteria on selective medium
- Q5. Respective diagnosis in a homosexual couple presenting with a genital ulcer and inguinal lymph node swelling :
- Painful ulcer + painless lymph node
 - Painless ulcer + painful lymph node
 - Painless ulcer + painless lymph node
 - Painful ulcer + painful lymph node
- Syphilis, Gonorrhea, Trichomonas, HIV
 - Chancroid, Donovanosis, HPV, LGV
 - HSV, LGV, Syphilis, Chancroid
 - HPV, Chancroid, Donovanosis, HSV
- Q6. A new rapidly spreading infection emerged in 2030 worldwide following which mass vaccination was done worldwide using an Artificial Intelligence generated vaccine. The incidence, prevalence and transmission became zero for 3 years. WHO will label this infection in 2033 as :
- Pandemic

MIST- MEDICAL INSTITUTE FOR SCREENING TEST

MICROBIOLOGY SUBJECT WISE TEST DATED ON 14TH MAY 2026

- b) Epidemic
- c) Eliminated
- d) Eradicated

Q7. After a air bombing attack on a hospital in 2026, medicine stock got destroyed and hospital needed to be evacuated. 4 nurses got shrapnel injuries on legs. FMGE doctor will administer _____ first before evacuating:

- a) Anti Tetanus serum
- b) Tetanus toxoid
- c) Both A and B
- d) Antibiotics

Q8. 40 year old biker was splenectomised after blunt trauma abdomen and splenic rupture in emergency. He will be administered :

- a) Vaccine against enveloped viruses 3 days after emergency splenectomy
- b) Vaccine against capsulated bacteria 7 days after emergency splenectomy
- c) Vaccine against encysted parasites 48 hours after emergency splenectomy
- d) Vaccine against spirochetes 10 days after emergency splenectomy

Q9. 36-year-old fashion model sample was injected into this animal :

- A. Most common nerve enlarged
- B. Type of granuloma
- C. Stain used
- D. Drug used

- a) Facial, caseating, Gram, Clarithromycin
- b) Sural, Durck, Levaditi, Penicillin
- c) Ulnar, non caseating, Fite-Faraco, Clofazimine
- d) Trochlear, Doughnut, Kinyoun, Linezolid

Q10. 21 year old sexually promiscuous female presented with urgency, frequency, hesitancy, burning micturition and fever. Urine and vaginal secretions revealed yellow and dull colonies on this media. Interpret sequentially:

- a) Indole positive and indole negative
- b) Catalase positive and catalase negative
- c) Urease positive and urease negative

MIST- MEDICAL INSTITUTE FOR SCREENING TEST

MICROBIOLOGY SUBJECT WISE TEST DATED ON 14TH MAY 2026

d) Lactose and non-lactose fermenter

Q11. Two patients with _____ would be having?

- A. cmyc gene mutation after Epstein Barr virus infection
- B. BCR-ABL gene mutation leading to CML
 - a) t(9:22), t(11:14)
 - b) t(8:14), t(9:22)
 - c) t(15:17), t(8:21)
 - d) t(14:18), t(21:22)

Q12. 3 months old child with centripetally distributed centrifugally spreading rash brought by mother. Most appropriate would be?

- a) Admit child in NICU and mother in post-partum ward
- b) Admit child in pediatric ward and mother in maternity ward
- c) Admit child and mother in gynae ward
- d) Admit child and mother in isolation ward

Q13. 3-year-old presented with acute watery secretory diarrhea and severe dehydration due to a toxin increasing cAMP. Gram stain will reveal :

- a) Comma shape bacteria
- b) Spirally coiled bacteria
- c) Bunch of grape bacteria
- d) Kidney shape bacteria

Q14. 18-year-old unvaccinated youtuber shared iv cocaine with his HBcAg positive homosexual partner :

- A. Treatment of his partner
- B. Prophylaxis for youtuber
 - a) Interferon- α for partner, Hepatitis B vaccine only for youtuber
 - b) Tenofovir monotherapy for partner, No prophylaxis for youtuber
 - c) Lamivudine for partner, Hepatitis B immunoglobulin only for youtuber
 - d) Tenofovir + Lamivudine + Entecavir for partner, Hepatitis B immunoglobulin + Hepatitis B vaccine for youtuber

Q15. Quarantine squad took away the baby away from the mother to prevent breastfeeding. Mother was :

- a) HIV positive
- b) Having pulmonary TB
- c) HBsAg positive
- d) Cocaine addict

Q16. 45-year-old with calcified Ghons focus and . calcified mediastinal/hilar lymph node. The combined entity is known as:

- a) Ranke complex
- b) Assman complex
- c) Simon focus

MIST- MEDICAL INSTITUTE FOR SCREENING TEST

MICROBIOLOGY SUBJECT WISE TEST DATED ON 14TH MAY 2026

d) Puhl focus

Q17. 55-year-old on 2(HRZE) + 4(HRE) always found his urine orange in colour. This is:

- a) Sign of liver failure
- b) Harmless side effect of rifampicin
- c) Sign of hemolysis
- d) Harmless side effect of isoniazid

Q18. Outbreak of Acute Inflammatory demyelinating polyneuropathy occurred in Pune in 2025 leading to many deaths. All possible except:

- a) Flaccid quadriparesis
- b) Spastic paralysis
- c) Bulbar paralysis
- d) Dysautonomia

Q19. Instagram influencer went on tinder date and had one night stand leading to thick foul smelling vaginal discharge. She didn't get treated and develop perihepatitis and peritonitis with violin string pattern. Identify :

- a) Ashermann syndrome
- b) Fitz Hugh Curtis syndrome
- c) Conn syndrome
- d) Dressler syndrome

Q20. 21-year-old Indian MBBS student travelled to meet his gf doing MBBS in California. They both enjoyed wild game meat together in Yosemite National Park. All are possible in this guy except :

- a) Bloody diarrhea
- b) Amoebic dysentery
- c) Bacterial dysentery
- d) Travellers' diarrhea

Q21. 35-year-old FMGE student married a Vietnamese doctor and settled in a big farmhouse. He got high fever, jaundice, conjunctival suffusion after farming in inundated rice field contaminated with rat urine. Etiology :

- a) Borrelia burgdorferi
- b) Leptospira interrogans
- c) Coxiella burnetii
- d) Orientia tsutsugamushi

Q22. 47-year-old meeting Duke's criteria was referred to ophthalmology OPD. All are possible except :

- a) Cotton wool retinal spots
- b) Conjunctival petechial hemorrhages
- c) Internal hordeolum
- d) Roth spots in retina

Q23. 30. Child with bull neck, greyish white membrane in throat, barking voice and fever. Which test is

MIST- MEDICAL INSTITUTE FOR SCREENING TEST

MICROBIOLOGY SUBJECT WISE TEST DATED ON 14TH MAY 2026

applicable for toxin detection ?

- a) Kirby Bauer test
- b) Naeglers test
- c) CAMP test
- d) Eleks gel precipitation test

Q24. 65-year-old with sequestrum and involucrum.

- A. Most common site affected in long bone.
- B. Most common etiology:

- a) Periosteum, Klebsiella
- b) Epiphysis, Strep pneumoniae
- c) Diaphysis, E coli
- d) Metaphysis, Staph aureus

Q25. 70-year-old with tingling numbness in feet and red-green colour blindness after taking 2(RHZE) + 4 (RHE). These are side effects of:

- a) Rifampicin, Pyrazinamide
- b) Bedaquiline, Pretomanid
- c) Rifapentine, Moxifloxacin
- d) Isoniazid, Ethambutol

Q26. A 17-year-old presented with complications of Clostridium perfringens infection of right thigh. All are possible except :

- a) Ischemia of right leg and foot
- b) Quellung reaction positive
- c) Toxemia
- d) Foot drop

Q27. Asymmetric war in middle east in 2026 involved use of a bioweapon which showed medusa head colonies, inverted fir tree colonies on agar. Etiology:

- a) Yersinia pestis
- b) Brucella melitensis
- c) Bordetella pertussis
- d) Bacillus anthracis

Q28. 25-year-old Commercial Sexual Worker presented with thin grey vaginal discharge with fishy smell :

- A. Which microscopic finding is expected ?
- B. Etiology .

MIST- MEDICAL INSTITUTE FOR SCREENING TEST

MICROBIOLOGY SUBJECT WISE TEST DATED ON 14TH MAY 2026

- a) Halberstaedter Prowazek bodies, Chlamydia
- b) Intracellular Gram negative diplococci, Neisseria gonorrhoeae
- c) Clue cell, Gardnerella + Mobiluncus
- d) Trophozoite in vagina, Trichomonas

Q29. 29-year-old multigravida with history of being on benzathine penicillin for 5 years during teenage. Gynecological assessment should be complemented with :

- a) CNS examination
- b) Cardiac evaluation
- c) Endocrine screening
- d) Vertebral disc MRI

Q30. Bioterrorism attack happened between Western powers and Eastern powers in World War III in 2029. Drones dispersed bioweapons over military camps leading to widespread buboes on body of soldiers. Likely agent:

- a) Yersinia pestis
- b) Bacillus anthracis
- c) Smallpox
- d) Ebola

Q31. 15 year old female presented with old history of sore throat leading to fever, tachycardia and Carey Coomb murmur :

- A. Which valvular lesions are expected
- B. Long term prophylaxis after treatment
- a) MS, MR, Benzathine penicillin
- b) AS, AR, Azithromycin
- c) MR, AR, Tetanus toxoid
- d) AMS, AS, Vancomycin

Q32. A techie couple ate momos and reported stepladder fever, relative bradycardia and rose spots. Antibody titres were tested. Which antibody was tested and what is the positive cut off titres?

- a) IgG, O 1 in 8, H 1 in 16
- b) IgM, O 1 in 100, H 1 in 200
- c) IgA, O 1 in 20, H 1 in 50
- d) IgE, O 1 in 1000, H 1 in 10000

Q33. Four patients positive for Steeple sign, Brudzinski sign, Murphy sign and Thumb sign. Identify the infectious etiology:

- a) Necrotizing fasciitis, gas gangrene, epiglottitis, giardiasis
- b) Psoriasis, Ritters syndrome, Ludwig's angina, Typhoid
- c) Erysipelas, folliculitis, croup, toxoplasmosis
- d) Croup, meningitis, cholecystitis, epiglottitis

Q34. 23-year-old lactating female with fever, pain and lump in breast went for incision and drainage. Pus culture is most likely to reveal :

MICROBIOLOGY SUBJECT WISE TEST DATED ON 14TH MAY 2026

- a) Gram positive bacilli in drumstick pattern
- b) Gram positive cocci in grape like cluster
- c) Gram negative bacilli in school of fish pattern
- d) Acid fast bacilli in globi

Q35. 37-year-old female with history of unprotected sexual contact got infected with smallest bacteria. All are applicable except:

- a) Cultured on PPLO agar
- b) Gliding motility
- c) Gram positive cocci
- d) IgM Cold agglutination

Q36. 2025 avian influenza outbreak occurred in 9 states in India. All are available modalities to manage the outbreaks except:

- a) Early diagnosis by RTPCR and isolation
- b) Antiviral Rx
- c) Quadrivalent Vaccine
- d) Chemoprophylaxis

Q37. 4-year-old scratched on leg by immunized pet dog. Child didn't cry and no bleeding was seen. Her parents washed the area with soap and water. Class of bite and most appropriate management:

- a) Nil, no action required
- b) I, Tetanus toxoid and antibiotic ointment
- c) II, Tetanus toxoid + Rabies vaccine
- d) III, Tetanus toxoid + Rabies vaccine + Rabies immunoglobulin

Q38. 46-year-old with Hepatitis B. Marker appearing first, marker of vaccination, marker of chronicity, marker of high infectivity would be ?

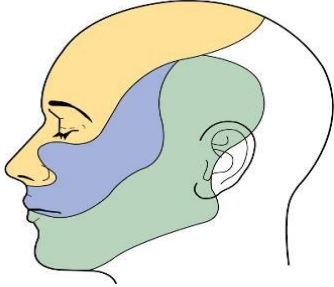

- a) HBsAg, Anti HBs, IgG Anti HBc, HBeAg
- b) HBcAg, Anti HBc, IgM Anti HBc, Anti HBe
- c) HBeAg, Anti HBe, HBxAg, Anti HBs
- d) HBxAg, Anti HBc, Anti HBs, Anti HBe

Q39. 33-year-old researcher working on electron microscope reported blurring of vision, photophobia and watering from left eye. FMGE intern diagnosed dendritic ulcer. Which stain will be used?

- a) Gram stain
- b) ZN stain
- c) Alberts stain
- d) Fluorescein stain

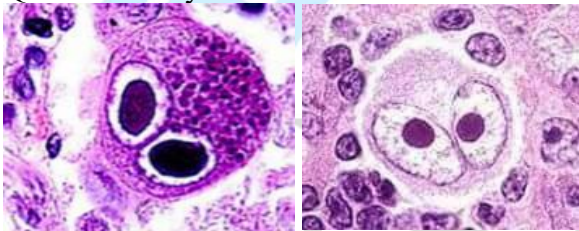

Q40. A 7-year-old child presented with centripetally distributed centrifugally spreading rash followed by fever on 2nd day of rash. Which branch of which ganglia is involved in latency?

MICROBIOLOGY SUBJECT WISE TEST DATED ON 14TH MAY 2026

- a) Ophthalmic branch of trigeminal ganglion
- b) Maxillary branch of geniculate ganglion
- c) Mandibular branch of spiral ganglion
- d) All branches of superior ganglion

Q41. Identify the cells:

- a) Popcorn cell (Lymphoma) and Hallmark cell (Lymphoma)
- b) Owl eye inclusion body (CMV) and Reed Sternberg cell (Hodgkins lymphoma)
- c) Downey cell (EBV) and Bizarre cell (HSV)
- d) Sezary cell (Lymphoma), Hairy cell (Leukemia)

Q42. A nurse sustained a needle stick injury from HIV positive patient and didn't take PEP. She reported with fever, headache, rash, sore throat, cough, diarrhea, lymphadenopathy. Her CD4 count was 700. Which clinical stage this corresponds to ?

- a) Acute retroviral syndrome
- b) Latent HIV hidden in CD4 cells
- c) AIDS related complex
- d) IRIS with resurfaced hidden infections

Q43. 42-year-old labourer presented with fever and encephalitis after tasting palm toddy from a palm tree inhabited by fruit bats in Keralam. Diagnosis, treatment, vaccine:

- a) Ebola, no treatment, rVsV-Zebov
- b) Hanta, galidesevir, no vaccine
- c) Rabies, no treatment, rabipur
- d) Nipah, no treatment, no vaccine

Q44. Two 45-year-old patients:

- A. HBsAg + Anti HBe positive
- B. IgG Anti HBc + HBeAg positive

What is your interpretation?

MIST- MEDICAL INSTITUTE FOR SCREENING TEST

MICROBIOLOGY SUBJECT WISE TEST DATED ON 14TH MAY 2026

- a) Hepatitis B with low infectivity, Acute Hepatitis B with high infectivity
- b) Hepatitis B with low infectivity, Chronic Hepatitis B with high infectivity
- c) Hepatitis B with Hepatitis D, Hepatitis B with Hepatitis C
- d) Hepatitis B carrier, Hepatitis B treated

Q45. 13-year-old presented with an accidental dead end arboviral infection clinically presenting with fever, headache, nuchal rigidity, confusion and seizures after mosquito bite. Identify vector, reservoir, amplifier and dead end host:

- a) Anopheles, bats, Cow, wild animals
- b) Aedes, Armadillo, human, none
- c) Culex, ardeid bird, pig, human
- d) Mansonia, monkey, wild animals, none

Q46. 31-year-old presented with fever, blanching rash, gum bleeding, bone pain after bite of Aedes mosquito. All are applicable except :

- a) Tourniquet test with >20 petechiae/ sq inch in cubital fossa
- b) Raised hematocrit
- c) Thrombocytopenia
- d) Ascending flaccid paralysis

Q47. Indian youtuber travelling to Africa got exposed to an arbovirus not seen in India. Identify the possibilities:

- a) Zika virus, Chandipura virus, Cocksackie virus
- b) KFD virus, CCHF virus, JE virus
- c) Ebola virus, Yellow fever virus, RFV virus
- d) Dengue virus, Chikungunya virus, WNV

Q48. A group of patients were administered Arexvy, Mosquirix, Ixchiq, Jynneos. Protection will be conferred against:

- a) Varicella zoster, Zika, Nipah, Influenza
- b) RSV, Malaria, Chikungunya, Mpox
- c) Dengue, Chikungunya, Zika, Yellow fever
- d) Rotavirus, Herpes, Smallpox, HPV

Q49. 2 months old baby detected to have Gibson continuous machinery train in tunnel murmur due to a transplacental infection. Identify the condition, etiology and treatment :

- a) Pulmonary artery stenosis, congenital varicella, acyclovir
- b) Patent ductus arteriosus, congenital rubella, ibuprofen
- c) Ventricular septal defect, congenital toxoplasmosis, cotrimoxazole
- d) Transposition of great vessels, congenital CMV, ganciclovir

Q50. 2-year-old child in Meghalaya presented with fever and acute flaccid paralysis of left lower limb after pulse polio immunization in 2024. Diagnosis, type of virus, cells involved in spinal cord:

- a) Inapparent polio, bullet shaped virus, Renshaw cells
- b) Bulbosplinal polio, DNA virus, epinedymal cells

MIST- MEDICAL INSTITUTE FOR SCREENING TEST

MICROBIOLOGY SUBJECT WISE TEST DATED ON 14TH MAY 2026

- c) Bulbar polio, enveloped virus, oligodendrocytes
- d) Vaccine derived polio, naked virus, anterior horn cells

Q51. 15 people from Canadian tour group presented with fever, cough, dyspnoea at rest after contact with Penguins in Antarctica in 2024. Chest X ray revealed pneumonia. Diagnosis, type of virus, treatment :

- a) Seasonal flu, H3N2, amantadine
- b) Swine flu, H1N1, zanamivir
- c) Avian flu, H5N1, oseltamivir
- d) Ovine flu, H9N2, peramivir

Q52. 33-year-old popstar presented in a state of hangover after overnight rave party including orgy. He voluntarily wanted to get tested immediately for detection of HIV. What is the minimum window period for diagnosis of HIV?

- a) 21 days
- b) 14 days
- c) 7-10 days
- d) Can be detected immediately after exposure

Q53. 29-year-old G4P1A1L1 in 3rd trimester developed fulminant hepatic failure, hepatic encephalopathy, renal failure, DIC, sepsis followed by cardiac arrest from which she could not be revived despite aggressive resuscitation. Most likely infection:

- a) Hepatitis A
- b) Hepatitis C
- c) Hepatitis D
- d) Hepatitis E

Q54. 45-year male sudden severe knife-like abdominal pain with referred shoulder pain. Examination revealed Hippocratic facies, tachycardia, mild fever, board like rigidity and distended silent abdomen. Most likely intestinal ulcer causing perforation:

- a) Rose thorn skip ulcer
- b) Longitudinal ulcer
- c) Flask shaped ulcer
- d) Transverse ulcer

Q55. 14-year-old bitten by sandfly reported with hepatosplenomegaly and fever. Bone marrow aspirated from anterior superior iliac spine will reveal:

- a) Russell body
- b) Lipschultz body
- c) LD body
- d) Reaginic antibody

Q56. Identify the wrong mosquito combination?

- a) Anopheles sophisticated mosquito, clean water, rests indoors, bites at night, ova has floats, transmits malaria
- b) Aedes Tiger mosquito, artificial container with rain water, rests outdoors, bites during daytime, larva has siphon tube, transmits dengue, chikungunya, zika, yellow fever

MIST- MEDICAL INSTITUTE FOR SCREENING TEST

MICROBIOLOGY SUBJECT WISE TEST DATED ON 14TH MAY 2026

- c) Culex nuisance mosquito, dirty polluted water, rests outdoors, bites at night, larva has siphon tube, transmits JE and filariasis
- d) Mansonia, rests indoors, day biter, larva attached to water plants, transmits plague

Q57. 44-year-old presented Entamoeba infection. Trophozoite can be identified by :

- a) Leaf shape
- b) Peritrichous flagella
- c) 4 nucleus cyst
- d) Erythrophagocytosis

Q58. 45-year HIV positive male watery diarrhea and steatorrhea. Duodenal string test was positive. Diagnosis, type of cyst, treatment?

- a) Amoebiasis, quadrinucleate cyst, albendazole
- b) Giardiasis, 4-nucleus cyst, metronidazole
- c) Toxoplasmosis, single nucleus cysts, cotrimoxazole
- d) Schistosomiasis, no cysts, praziquantel

Q59. Group of kindergarten kids complained of nocturnal itching in finger webs after a birthday celebration. While under treatment with 5% permethrin, Dermoscopy will reveal:

- a) Tree branch blood vessels
- b) Burrow lesions in stratum corneum
- c) Splinter nail hemorrhages
- d) Wickhams striae

Q60. 89. 8-year-old positive for these ova in stool examination would be presenting with _____ due to _____ and can be treated by _____ :

- a) Diarrhea, Giardia monkey shaped trophozoite, metronidazole
- b) Seizures, Taenia solium, praziquantel
- c) Dysentery, Trichuris whipworm, albendazole
- d) Gastritis, Helicobacter pylori, omeprazole

Q61. 9-year female with nocturnal enuresis and perianal itching. Ova will be :

- a) Operculated ova
- b) D-shaped planoconvex ova
- c) Ova with terminal spine
- d) Barrel shaped ova with mucus plugs

MIST- MEDICAL INSTITUTE FOR SCREENING TEST

MICROBIOLOGY SUBJECT WISE TEST DATED ON 14TH MAY 2026

Q62. 38-year-old tribal from Sentinel Island was brought with cyclopropagative malaria since few months. Radical Rx:

- a) Chloroquine only
- b) Chloroquine + Primaquine
- c) Artemisinin combo Rx
- d) Doxycycline + Clindamycin

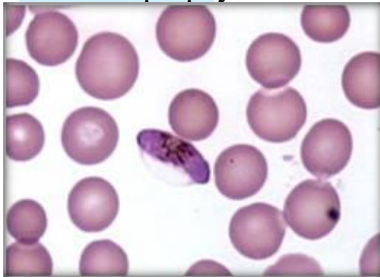

Q63. 39-year-old female with green vaginal discharge after unprotected contact. To check for fishy odour, which test will be done?

- a) Schick test
- b) ONPG test
- c) Whiff test
- d) String test

Q64. 41-year man with fever, productive cough, hemoptysis, chest pain, respiratory distress after bite of a wingless insect which can only jump. Identify the vector:

- a) Xenopsylla cheopis
- b) Phlebotomus argentipes
- c) Glossina palpalis
- d) Pediculus humanus corporis

Q65. 30-year-old female presenting with fever, chills and rigors. PBS revealed this. Drug of choice for treatment and chemoprophylaxis in India is:

- a) Chloroquine, Chloroquine
- b) Quinine, Halofantrine
- c) Clindamycin, Doxycycline
- d) Chloroquine, Mefloquine

Q66. 64-year-old homeless mentally ill PLWHA with millions of mites on his body. Diagnosis:

- a) Norwegian Scabies
- b) Leishmaniasis
- c) Myiasis
- d) Bilharziasis

Q67. 45-year HIV positive male with CD4 count 350 presented with chyluria, chylous ascitis, lymphangitis and lymphadenitis. Expected findings in capillary blood sample?

MICROBIOLOGY SUBJECT WISE TEST DATED ON 14TH MAY 2026

- a) Trypomastigotes
- b) Sheathed microfilaria without tail nuclei
- c) Banana shaped gametocytes
- d) Maltese cross merozoites

Q68. 72-year-old farmer from Tamil Nadu with chronic multiple sinuses in foot oozing pus. All are possible treatment options except?

- a) Amputation
- b) Welsh regimen
- c) Itraconazole
- d) Metronidazole

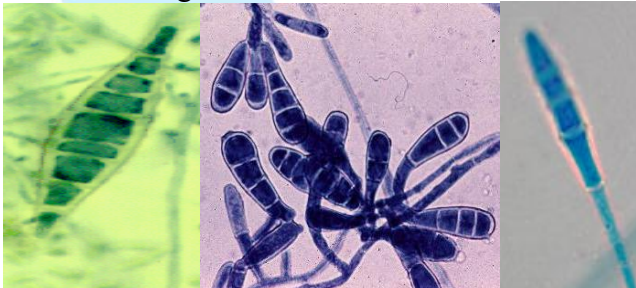

Q69. Sabourauds dextrose agar revealed cottony fluffy colonies from 88-year-old patient with disseminated mycosis. Which antigen is likely to be positive?

- a) Glactomannan
- b) Rk39
- c) HRP2
- d) pp65

Q70. 33-year-old commercial sexual worker presented with cheesy curdy white vaginal discharge with curdy odour confirmed by colposcopy. Whiffamine test was negative. Microscopy will reveal?

- a) Metachromatic granules
- b) Gram positive budding yeast cells
- c) Gram negative branching filaments
- d) Acid fast oocysts

Q71. Smears from three patients presenting with tinea infections revealed the following. Identify macroconidia from left to right:

- a) Trichophyton, Microsporum, Epidermophyton
- b) Microsporum, Epidermophyton, Trichophyton
- c) Epidermophyton, Trichophyton, Microsporum
- d) Trichophyton, Epidermophyton, Microsporum

Q72. India Ink stain revealed capsulated yeasts from CSF obtained through lumbar puncture in an HIV positive commercial sex worker. Gold standard test will be:

- a) Cryptococcal germ tube test

MIST- MEDICAL INSTITUTE FOR SCREENING TEST

MICROBIOLOGY SUBJECT WISE TEST DATED ON 14TH MAY 2026

- b) Cryptococcal antigen test
- c) MRI brain for Cryptococcal changes
- d) CECT brain for Cryptococcal changes

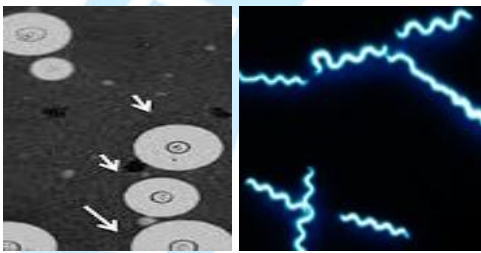

Q73. 55-year-old PLWHA with fungal pneumonia treated by cotrimoxazole. Diagnosis, stain used?

- a) Sarcocystis strainii, PAS stain
- b) Aspergillus flavus, lactophenol cotton blue
- c) Blastocystis hominis, Giemsa stain
- d) Pneumocystis jirovecii, Grocott's silver stain

Q74. 51-year-old HIV positive patient with poor drug compliance got admitted with :

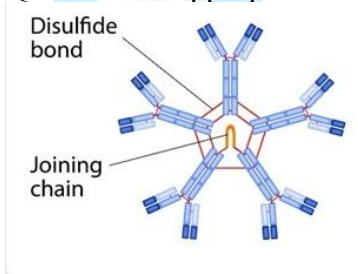

- A. Fever, headache, neck stiffness
- B. Painless genital ulcer and painless inguinal lymphadenopathy

Identify the stains used for diagnosis:

- a) India Ink stain, Silver impregnation stain
- b) Sudan black stain, Leishman stain
- c) Giemsa stain, Prussian blue stain
- d) Wrights stain, Warthin Starry stain

Q75. Most appropriate combination:

- a) Valency 2, Type I hypersensitivity, least common
- b) Valency 2, most common antibody, transplacental
- c) Valency 10, heaviest antibody, rises in acute infection
- d) Valency 4, mucosal immunity, seen in colostrum

Q76. 2-year unvaccinated girl was positive by an intradermal test using 2 TU/0.1 ml of Purified protein derivative RT-23 antigen as per WHO standards. Which test is this?

- a) Kirby Bauer test
- b) Mantoux test

MIST- MEDICAL INSTITUTE FOR SCREENING TEST

MICROBIOLOGY SUBJECT WISE TEST DATED ON 14TH MAY 2026

- c) Horrocks test
- d) Eleks gel precipitation test

Q77. 11-month-old immunocompromised unimmunized child brought to immunization centre. Which vaccine can be given safely?

- a) RA 27/3 vaccine
- b) BCG vaccine
- c) Salk vaccine
- d) Edmonston Zagreb

Q78. 41-year-old promiscuous female donated blood which was found to be RPR positive. RPR detects antibodies against _____ antigen:

- a) Treponema cell wall
- b) Treponema endoflagella
- c) Treponema DNA
- d) Cardiolipin

Q79. Newborn baby got infected by Typhoid and dengue. First antibody synthesized will be:

- a) IgA, IgA
- b) IgG, IgG
- c) IgM, IgM
- d) IgE, IgD

Q80. FMGE doctor inspected an Ice lined refrigerator for cold chain in UIP at a peripheral Ayushman Arogya Mandir. ILR is supposed to maintain vaccines at:

- a) -15 to -25 degree Celsius
- b) +2 to +8 degree Celsius
- c) 0 to +1 degree Celsius
- d) -70 degree Celsius

Q81. 45-year-old labourer reported with delayed type hypersensitivity. All are possible except:

- a) Granuloma in TB
- b) Contact dermatitis
- c) Hemolytic anemia
- d) Lepra reaction type 1

Q82. Army soldiers fighting in desert in 2026 released swarm of poisonous red ants. Entire population of local area was killed within minutes of ant bite. This is hypersensitivity Type:

- a) 1
- b) 2
- c) 3
- d) 4

MIST- MEDICAL INSTITUTE FOR SCREENING TEST

MICROBIOLOGY SUBJECT WISE TEST DATED ON 14TH MAY 2026

Q83. Wildlife explorer working with National Geographic took a vaccine which gives lifelong immunity after single dose. Identify the vaccine:

- a) BCG
- b) PCV
- c) Sabins
- d) 17D

Q84. Parents of 2 kids studying in class 10th and class 2nd were counselled for a new vaccine free of cost under UIP for their teenage daughter in 2026. Identify the vaccine:

- a) PCV
- b) Gardasil
- c) MR
- d) Rubella for teenage girls

Q85. Sequentially match antibiotics (Rifampicin, Erythromycin, Gentamicin, Cloxacillin, Luliconazole) based on target site :

- a) Cell wall, cell membrane, DNA, 50S, 30S
- b) DNA, 50S, 30S, cell wall, cell membrane
- c) 50S, 30S, DNA, cell membrane, RNA
- d) Flagella, metabolism, cell division, pili, 70S

Q86. Sequentially match the smears for HPV, Leprosy, Herpes simplex, filariasis :

- a) Tzanck, PAP, slit skin, peripheral blood
- b) Peripheral blood, Tzanck, PAP, slit skin
- c) PAP, slit skin, Tzanck, peripheral blood
- d) Slit skin, peripheral blood, PAP, Tzanck

Q87. 21-year-old villager walking barefoot developed in an area having Chandlers index >300. Most likely:

- a) Hemolytic normocytic normochromic anemia
- b) Iron deficiency microcytic hypochromic anemia
- c) Megaloblastic macrocytic hyperchromic anemia
- d) Aplastic anemia and pancytopenia

Q88. 6-year-old with simultaneous crop of macules, papules, pustules, nodules, vesicles and scars. Diagnosis:

- a) Herpes simplex
- b) Herpes zoster
- c) German measles
- d) Varicella zoster

Q89. Group of 5 on a canyoneering trip presented with vomiting after 5 hours of eating canned chickpeas. Toxin exposure:

- a) Ricin
- b) Botox
- c) Ovitoxin

MIST- MEDICAL INSTITUTE FOR SCREENING TEST

MICROBIOLOGY SUBJECT WISE TEST DATED ON 14TH MAY 2026

d) Sanguinarine

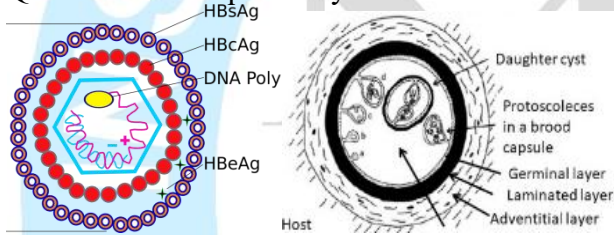

Q90. New pandemic in 2040 created human zombies due to exposure to zombitoxin. FMGE doctor doing internship was bitten by an infected zombie girl. Post exposure prophylaxis can be given with :

- a) Zombitoxin antigen
- b) Zombitoxin toxoid
- c) Zombitoxin adjuvant
- d) Zombitoxin antisera

Q91. 36-year-old Rh negative primigravida with Rh positive fetus suffered road traffic injury leading to abruptio placenta. Dose of Anti Rho will be determined by :

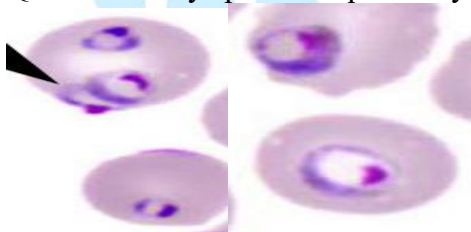

- a) Benzidine test
- b) USG pelvis
- c) D- dimer levels in blood
- d) Kleihauer Betke test

Q92. Match sequentially:

- a) Tzanck smear, Liver fluke
- b) Heamagglutinin, Neuraminidase
- c) Australia antigen, Water lily sign
- d) CD4 receptor, D shaped ova

Q93. Identify species sequentially in peripheral blood smear:

- a) Plasmodium falciparum, Plasmodium vivax
- b) Plasmodium vivax, Plasmodium falciparum
- c) Ascaris, Trichuris
- d) Schistosoma, Trypanosoma

Q94. 5-year-old child displaced due to World War III developed cephalocaudal rash on 4th day, and couldn't receive treatment. All are possible complications except :

- a) Hypovitaminosis A

MICROBIOLOGY SUBJECT WISE TEST DATED ON 14TH MAY 2026

- b) Hemolytic uremic syndrome
- c) Immunocompromised state
- d) Reye syndrome

Q95. 33 residents of a remote village with history of consumption of maize were found to have altered liver function tests. Which tumour marker is likely to be positive?

- a) Alpha fetoprotein
- b) HER2/neu
- c) Carcinoembryonic antigen
- d) CA 19-9

Q96. 33-year-old cyclist hit by overspeeding sports car was found to have rebound tenderness on abdominal palpation. Diagnosis and most common cause:

- a) Acute kidney injury, Klebsiella
- b) Splenic rupture, Staph aureus
- c) Perforation peritonitis, E coli
- d) None of the above

Q97. Two patients matched Mantrels criteria and Ransons criteria. Identify the signs in them sequentially:

- a) Mc Burneys sign, Grey Turners sign
- b) Murphys sign, sunset sign
- c) Kehrs sign, Blumbers sign
- d) Boas sign, sunrise sign

Q98. 22-year-old FMGE doctor with a painless hard Hunterian chancre and non tender multiple firm small less than 1 cm shotty lymph nodes appearing like buckshot or pellets. Dark ground microscopy will show :

- a) Corkscrew motility
- b) Safety pin appearnace
- c) School of fish pattern
- d) Intracellular Donovan bodies

Q99. 23-year-old FMGE student went for hiking in Bali with her boyfriend. She had a contact with a plant thorn following which she had allergy and itching all over her body, difficulty in breathing and giddiness. Biomolecule responsible and Rx :

- a) Dopamine, Cyproheptadine
- b) Serotonin, Olanzapine
- c) Histamine, Fexofenadine
- d) Glycine, anti Tetanus serum

Q100. 22-year-old FMGE student developed P. falciparum malaria on a camping trip with his 3 batchmates in Nigeria. Which stage can be picked up by female Anopheles to spread malaria to his friends in the camp?

- a) Sporozoite
- b) Gametocyte
- c) Merozoite
- d) Trophozoite
