- d) The injury is possible in fall from height

Q3. The 3 mandatory members of a board of doctors for a state according to the amended MTP act 2021, are all except?

- a) Gynecologist
- b) Anesthetist
- c) Pediatrician
- d) Radiologist

Q4. In a case of civil negligence the patient proves the negligence of a doctor by proving 4 D's of negligence. What is not involved in it?

- a) Duty
- b) Dereliction of duty
- c) Damage
- d) Death

Q5. The correct statement regarding fetal autopsy is?

- a) Dead born fetus shall not show maceration.
- b) Live born fetus will have maceration.
- c) Skull shall be opened last.
- d) Abdomen shall be opened before thorax.

Q6. A pregnant female comes to an abortion clinic and gives a history of contraceptive failure. She is 12 weeks pregnant. The doctor can perform MTP on her till what gestational age?

- a) 20 weeks
- b) 24 weeks
- c) Only till 16 weeks
- d) Any time during pregnancy but only with permission of a board

FSM SUBJECT WISE TEST DATED ON 9th MAY 2026

Q7. A patient of HIV positive status dies in hospital. His body has to be autopsied for medico-legal purposes. What evisceration technique will be preferred?

- a) Virchow's
- b) Rokitanski's
- c) Lettule
- d) Ghon

Q8. The brown triangular opacity in the sclera, can be seen in :

- a) Burn injuries to face
- b) Only in asphyxial deaths
- c) Drying of eye in a dead body
- d) Electrical current to eyeball

Q9. While conducting post-mortem examination, active defense injuries are noted on the body. What is the likely weapon?

- a) Cricket bat
- b) Iron rod
- c) Knife
- d) Thick jute rope

Q10. The correct matches of preservation and preservative used in autopsy are all except?

- a) Blood- sodium fluoride
- b) Urine- thymol
- c) Viscera- wax
- d) Tissue sample- formalin

Q11. A man suffers a head injury and dies. Upon opening of skull a cranial bleed is encountered lying upon dura. It is believed that this bleed is due to cranial trauma and is the cause of death. Correct statement is?

- a) It is EDH
- b) It is SAH
- c) It is SAH
- d) It is hematoma in scalp

Q12. The artificial insemination technique where the husband's semen is mixed with the donor semen before injecting into the female genital tract, is called as?

- a) Artificial insemination donor
- b) Artificial insemination homologous
- c) Artificial insemination homologous donor
- d) Artificial insemination externus

Q13. A person in hypothermia presents with drowsiness, his body temperature of 30 degrees. What significant finding will be seen in him?

- a) No shivering
- b) No sweating

MIST- MEDICAL INSTITUTE FOR SCREENING TEST

FSM SUBJECT WISE TEST DATED ON 9th MAY 2026

- c) No pulse
- d) Intact orientation

Q14. A male is caught peeking into the female changing room of a clothing shop in a mall. This act is called as?

- a) Exhibitionism
- b) Voyeurism
- c) Stalking
- d) Frotteurism

Q15. The correct matching of sign & symptoms/ clinical state and respective poisoning is?

- a) MI like chest pain- cocaine over dose
- b) Burtonian line- Opium poisoning
- c) Hatters shakes- lead poisoning
- d) Basophilic stippling of RBC's- arsenic poisoning

Q16. What is statutory rape?

- a) Sexual intercourse with 22year old female without her consent
- b) Sexual intercourse with self-wife who is less then 18 years of age
- c) Sexual intercourse with 17year old female with her consent
- d) Rape done on a female by intoxicating her

Q17. A 16year old female, victim of rape, is 18 weeks pregnant. Her guardian wants MTP done. What is the correct statement?

- a) Can be done till 20 weeks- 1 doctor required.
- b) Can be done till 24 weeks- 2 doctors required.
- c) Can be done beyond 24 weeks- board of doctors.
- d) Can be done till 20 weeks- 2 doctors required.

Q18. During autopsy on a body of gunshot victim two wounds are noted. What would qualify one of them as an entry wound?

- a) Bigger in size than the other wound
- b) Margins turned outwards
- c) Associated with abrasion collar
- d) Bleeding profusely

Q19. A rape victim has come for examination. She refuses to give consent. What should be done next by the examining doctor next?

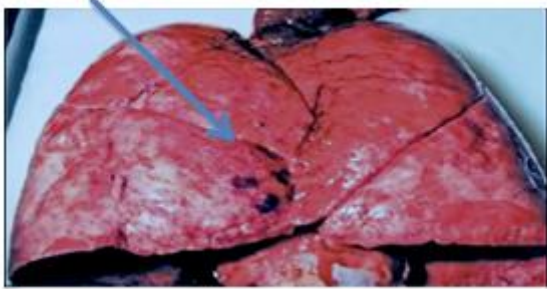

- a) Notify her informed refusal on the examination paper.
- b) Counsel her
- c) Tell the accompanying police officer and defer the examination.
- d) Ask her attendants to persuade her.

Q20. What combination of finding is expected to be seen in a case of drowning, in salt water?

- a) Hemodilution, hypernatremia, hyperkalemia
- b) Hemoconcentration, hypernatremia
- c) Hemodilution, hyperkalemia
- d) Hemoconcentration, hyponatremia, hyperkalemia

Q21. A dead body is recovered from water. During autopsy, Large, non sharply defined, hemolytic spots are seen in lungs beneath the pleura (as shown in the photograph). Presence of these lesions are suggestive of :

FSM SUBJECT WISE TEST DATED ON 9th MAY 2026

- a) Postmortem drowning
- b) Dry drowning
- c) Ante-mortem wet drowning
- d) Trauma before drowning

Q22. Crescentic nail abrasions and oval shaped contusions are seen on the neck during external examination of a dead body. The face is highly congested with intense subconjunctival hemorrhages. These are highly indicative of?

- a) Carbon mono-oxide poisoning
- b) Hanging
- c) Throttling
- d) Traumatic asphyxia

Q23. During autopsy of a dead body of an infant, autopsy doctor finds that the color of the lungs are bright pink, borders are rounded & air cells are convexed on the surface. The correct statement is?

- a) Dead born fetus
- b) Criminal abortion before 28 week of gestation
- c) Plouquet's test will show lung weight 1/35th of the total body weight
- d) Raygat's test will be negative

Q24. The guidelines of Declaration of Istanbul 2008 are related to?

- a) Torture
- b) Pronouncing death
- c) Therapeutic abortion
- d) Organ transplantation

Q25. The concept 'Let the superior answer' is associated with which situation?

- a) Civil negligence of a doctor
- b) Vicarious liability
- c) Therapeutic privilege
- d) Privileged communication

Q26. A Juvenile court sends a child for determination of age. During his examination the board of doctors determines that he is in the age of mixed dentition. What dental finding will be seen in him?

- a) Presence of only permanent teeth
- b) Eruption of 2nd permanent molar tooth
- c) Only 1 superadded tooth present
- d) 28 teeth present on oral cavity

Q27. All are permanent succusional teeth, except?

- a) 3rd right upper molar

FSM SUBJECT WISE TEST DATED ON 9th MAY 2026

- b) Right lower canine
- c) 2nd right lower pre molar
- d) left upper incisor

Q28. A skull having Cephalic index of 78% will belong to?

- a) Dolicocephalic race
- b) Brachycephalic race
- c) Mesaticephalic race
- d) Male sex

Q29. An old homicidal crime site is investigated for presence of any blood stains. It is believed that if old blood stains are present, it will show luminescence with?

- a) UV light
- b) Luminol spray
- c) Infra-red light
- d) Natural sun light

Q30. All are doctrine of mental illness used in the court of law for defending crime by an alleged mentally ill person, except?

- a) McNaughton's rule
- b) Durham's rule
- c) Curran's rule
- d) Puppe's rule

Q31. A genital examination is done on the dead body of a 20 years old female. Her hymen is seen having a single tear at 7 o'clock position. This is highly indicative of ?

- a) Rape before death
- b) Sexual intercourse before death
- c) Virginity
- d) Vaginal instrumentation before death

Q32. Lugol iodine vapour test comes positive for a penile sample of a male. Which second test shall also come positive in this case?

- a) Papanicolaou stain test
- b) Tiechmann's test
- c) Barberio's test
- d) Florence test

Q33. A dead body is found in the cold winter morning in a room with all windows closed and wooden fire burning inside. The post-mortem lividity of the dead body is shown in the photo. The cause of death in this case would be?

- a) Flame burns
- b) Cyanide poisoning
- c) Hypothermia

MIST- MEDICAL INSTITUTE FOR SCREENING TEST

FSM SUBJECT WISE TEST DATED ON 9th MAY 2026

d) Carbon-monoxide poisoning

Q34. A factory worker with long history of working in a factory which makes domestic cleaning products, develops numbness around the mouth and muscle cramps. On lab examination the calcium levels in blood are low. What other examination is helpful in this case for diagnosis?

- a) Peripheral blood smear
- b) Intestinal X ray
- c) EEG
- d) Urine routine microscopy

Q35. A child is brought in restless state to hospital. He is not recognizing his own mother. His friends allege he ate something from road side. On examination his body temperature is high and his voice is hoarse. What is the antidote for his intoxication?

- a) Digibind
- b) Physostigmine
- c) Atropine
- d) Naloxone

Q36. If it is said that viscera is preserved in an autopsy for determining presence of any poison in the body. What is routinely not preserved ?

- a) Stomach
- b) Heart
- c) Intestines
- d) Blood

Q37. A worker, working in a glass factory for past 30 years, presents with mild tremors in his fingers. He observed these tremors 3 days back. He is suffering with?

- a) Hatters shakes due to lead exposure
- b) Dystonic tremors due to copper poisoning
- c) Flapping tremors due to phosphorus
- d) Danbury tremors due to mercury exposure

Q38. A farm worker presents to emergency with drooling of saliva from mouth, tachycardia, vomiting and soiling of clothes with feces. His accompanying person tells that he developed this condition while working in the fields the same day. What drug is required immediately to treat him?

- a) Pralidoxime
- b) Physostigmine
- c) Atropine
- d) Naloxone

Q39. For snake bite, WHO protocol of RIGHT is to be followed. It does not include ?

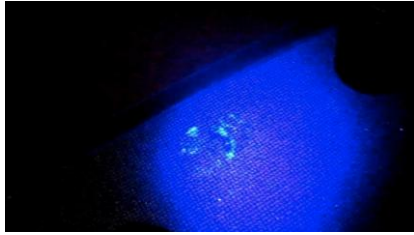

- a) Reassurance
- b) Immobilization
- c) Go to the hospital
- d) Tourniquet

Q40. A crime site of an alleged case of sexual assault is examined in UV light. The appearance shown in the picture is noted on the bed Lenin. The fluorescence seen is due to?

MIST- MEDICAL INSTITUTE FOR SCREENING TEST

FSM SUBJECT WISE TEST DATED ON 9th MAY 2026

- a) Vaginal fluid
- b) Blood
- c) Semen
- d) Saliva

Q41. A 27 year male is found semiconscious at road side. His body is cold, heart rate and respiratory rate are low. O/E his pupils are pin point. He doesn't feel any pain on being hit on the body. The compound responsible for his condition is?

- a) Opium
- b) Cocaine
- c) Methamphetamine
- d) Marijuana

Q42. A dead body is found in a jungle. The body is swollen, has greenish black appearance all over and violet lines are seen at places on the body. Foul smell is coming from it. What postmortem change is responsible for this condition of the body?

- a) Putrefaction
- b) Mummification
- c) Saponification
- d) Adipocere formation

Q43. A patient comes to emergency with cyanide poisoning. The nurse immediately opens up the cyanide kit and gives sodium nitrate injection. The mechanism of action of sodium nitrate in cyanide poisoning is formation of?

- a) Methemoglobin
- b) Carboxyhaemoglobin
- c) Myoglobin
- d) Free radicals

Q44. A 100% burnt body is brought for autopsy. It is alleged that the dead was a factory worker who got trapped in the factory fire. What finding will confirm death by anti-mortem burns?

- a) Lines of redness
- b) Blackening on the body
- c) Soot particles in trachea
- d) Pugilistic attitude of the body

Q45. Two school boys are fighting with each other as both believe a certain girl loves him and not the other. In the process one pushes the other to the ground, sits on his chest while punching him and closes his mouth and nose with hands. The victim dies. This asphyxial death is called as ?

- a) Smothering
- b) Gagging
- c) Burking
- d) Bandsola

FSM SUBJECT WISE TEST DATED ON 9th MAY 2026

- Q46. A criminal is shot by the police during an encounter. His dead body has a 2mm circular bullet entry wound in head. No blackening or tattooing is seen around the opening. At autopsy one bullet is recovered from brain. The correct statement is?
- He has been shot by a shotgun
 - The shot has been made from a close range
 - The skull bone shall have beveled out margins
 - The skull bone shall have beveled in margins
- Q47. The sequence in which the structures will occlude with increasing pressure on the neck in cases of compression of neck in asphyxial deaths, is?
- Carotid artery>trachea>jugular vein>vertebral artery
 - Carotid artery>jugular vein>trachea>vertebral artery
 - Jugular vein>carotid artery>trachea>vertebral artery
 - Trachea>jugular vein>carotid artery>vertebral artery
- Q48. A doctor receives two summons- one to appear in a court for a murder case and the other to give evidence as an expert witness in a case of civil negligence by another doctor. Which court appearance should be the priority of the doctor ?
- Appearance in the negligence case

- Q49. A boy of 22 years of age has committed suicide. The inquesting officer has suspicion about his death. He orders postmortem examination of the body. This is called as?
- Medico-legal autopsy
 - Hospital autopsy
 - Virtual autopsy
 - Psychological autopsy
- Q50. According to the X-ray the age of the individual is?

- Less than 7 years
- 13-15 years
- 21 years
- 18-21 years

- Q51. In a case of bomb blast death, Marshall's triad injuries is found on the victims body. This triad is classified under which type of blast injury ?
- Primary blast injury
 - Secondary blast injury
 - Tertiary blast injury
 - Quaternary blast injury

FSM SUBJECT WISE TEST DATED ON 9th MAY 2026

Q52. The below shown injury is found on the skull at autopsy. What weapon could cause this injury?

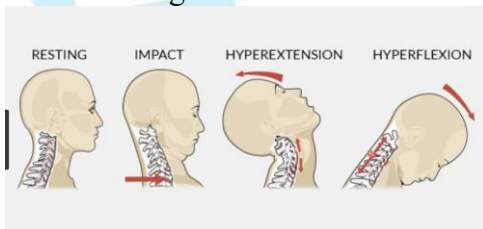

- a) Heavy cutting weapon
- b) Sharp and pointed weapon
- c) Heavy weapon with small sticking area
- d) firearm

Q53. A stain showing luminescence in UV light, is sent for analysis to Forensic Science lab. In lab the stained smear of the sample shows the below seen microscopic appearance. The correct combination of stain, test & generated crystals is?

- a) Semen-Florance test-choline Iodide crystals
- b) Semen- Picric acid test-Sperm in picrate crystals
- c) Blood- Takayama test- hemochromogen crystals
- d) Blood- Teichmen's test- hemin chloride crystals

Q54. The occupants of a car sustains injuries in the neck by the phenomenon shown below in the picture during a situation of road traffic accident. The injuries are most likely to be seen in?

- a) Driver + front rider
- b) Front rider + back seat passenger
- c) Driver + back seat passenger
- d) All of them

Q55. A person is attacked on forehead with a lathi. His forehead has a laceration. What is the mechanism of lacerations on this area of the body?

- a) Avulsion of skin
- b) Tearing of skin due to pressure
- c) Stretching of skin due to force
- d) Crushing of skin between two hard objects

Q56. A self inflicted cut will have all except?

- a) Present on easily accessible area of the body
- b) Unidirectional
- c) Deep

FSM SUBJECT WISE TEST DATED ON 9th MAY 2026

d) On non- vital area of body

Q57. A body is found in a lake. Upon recovery it shows the below shown picture. The appearance is due to?

- a) Secondary drowning
- b) Cadaveric spasm
- c) Post-mortem drowning
- d) Rigor mortis

Q58. All forms of consent are acceptable in medical practice except?

- a) Informed consent
- b) Blanket consent
- c) Implied consent
- d) Verbal consent

Q59. According to BNS section 116, it will be grievous hurt if a person is unable to perform ordinary his daily routiens for a period of?

- a) 10 days
- b) 15 days
- c) 20 days
- d) 7 days

Q60. In a dead body recovered from water, what evidence would suggest an ante-mortem drowning?

- a) Cutis anserina
- b) Washerman's hands and feet
- c) Frothing
- d) Muddy water in nostrils

Q61. A radiological sign as shown in the photograph is seen on Ultrasound examination of fetal head in pregnancy. The fetus is declare dead. This sign is called?

- a) Robert sign
- b) Quetlet rule
- c) Spalding sign
- d) Glove & stocking sign

Q62. Sachin an electritian sustains the injury shown in the picture while working. All are true about the injury except?

FSM SUBJECT WISE TEST DATED ON 9th MAY 2026

- a) These are joule burns
- b) Fingers are the most common area for their development
- c) The injury is soft to touch
- d) It has pale base on cutting

Q63. A clinician diagnoses a 45-year-old female, mother of two with advanced stage cervical cancer. To maintain the compliance of the pt for the treatment the doctor dose not break the complete prognosis to the pt. The doctor has exhibited?

- a) Negligence
- b) Privileged communication
- c) Therapeutic privilege
- d) Patient autonomy

Q64. Marbling in a dead body develops due to?

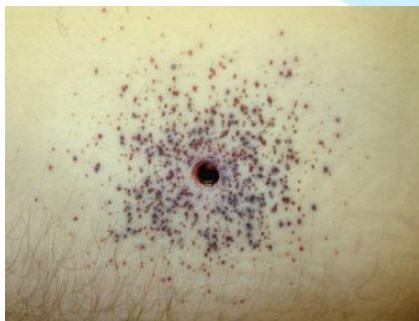

- a) Sulph-meth hemoglobin
- b) Collection of blood in the dependent vessels
- c) Loss of ATP
- d) Putrefaction

Q65. The ammunition shown in the photograph will be used in which kind of firearm?

- a) Pistol
- b) Revolver
- c) Rifle
- d) Shotgun

Q66. A person is shot by a revolver. The entry wound is shown in the picture. There was also the presence of blackening around the entry wound which got wiped off while cleaning the wound. The distance of gunshot would be?

MIST- MEDICAL INSTITUTE FOR SCREENING TEST

FSM SUBJECT WISE TEST DATED ON 9th MAY 2026

- a) Contact range
- b) Close range
- c) Distant range
- d) Any range is possible

Q67. If it is said that a person is dead in road traffic accident as he was walking on the road when he got hit by a speeding car and he developed bumper fracture. When does this injury happen?

- a) Primary impact
- b) Secondary impact
- c) Tertiary impact
- d) Depends upon accident

Q68. There are multiple, superficial cuts present at the beginning of a deep cut on neck of a dead body. This is a case of?

- a) Homicide
- b) Accident
- c) Suicide
- d) Cannot be determined

Q69. A person produces a false bruise on his body to wrongly implicate someone for assault. On examination a Forensic Medicine doctor diagnoses it as false bruise. What finding the doctor would have noted to label it as false bruise?

- a) Diffuse margins
- b) Color change
- c) Vesicular eruption around the wound
- d) Underneath bone fracture

Q70. Hippus is seen in?

- a) Cyanide poisoning
- b) Organo-phosphorus poisoning
- c) Opioid overdose
- d) Aconite poisoning

Q71. If it is said that a female sustains flame burns while cooking at home. And she has completely burnt right lower limb, complete chest, left front of abdomen, and left upper limb. What percent of her body is burnt according to rule of 9?

- a) 45%
- b) 54%
- c) 51.5%
- d) 41.5%

Q72. A case of corrosive poisoning is brought to emergency. The junior doctor is not doing gastric lavage as its contraindicated in corrosive ingestion. But a senior doctor tells him that in this case gastric lavage can be done. What corrosive substance is ingested?

- a) Barbiturates
- b) Carbolic acid
- c) Paracetamol
- d) Sulphuric acid

Q73. If a person is bitten by krait, what symptom will predominate?

- a) Excessive bleeding from bite area

MIST- MEDICAL INSTITUTE FOR SCREENING TEST

FSM SUBJECT WISE TEST DATED ON 9th MAY 2026

- b) Gum bleeding
- c) Respiratory difficulty
- d) No symptom only minor swelling at bite site

Q74. An old worker of a factory develops abdominal pain and loss of muscle power. He sees a doctor and after due examination and investigation his peripheral smear shows basophilic stippling of RBC's. The doctor suspects some metallic poisoning. What poisoning it could be?

- a) Chronic Lead poisoning
- b) Acute Arsenic poisoning
- c) Copper poisoning
- d) Chronic Mercury poisoning

Q75. Black foot disease is seen in?

- a) Acute organo-phosphorus poisoning
- b) Chronic arsenic poisoning
- c) Chronic marijuana abuse
- d) Acute alcohol intoxication

Q76. Most full proof identification is?

- a) DNA
- b) Fingerprints
- c) HLA typing
- d) Tattoos

Q77. A person has been missing from his house for last 3 years. As per section 111 of Bhartiya Shakshya Adhiniyam (BSA) until when his son cannot claim his property?

- a) 11 years
- b) 5 years
- c) 7 years
- d) 20 years

Q78. Blood sample is to be preserved during autopsy. The doctor soaks blood on cloth piece, now what should be done for preservation?

- a) Seal as it is in a plastic envelope
- b) Put the cloth in hot air oven and seal after its dry
- c) Dry the cloth in room air and then seal it
- d) No need to seal, hand over the wet cloth to the police

Q79. A skeleton has been found at an abandoned area. The investigators have brought it to the doctor for determination of sex. The doctor assesses the pelvic bone. What would be in favor of a male pelvis?

- a) Wide and shallow greater sciatic notch
- b) Obtuse sub-pubic angle
- c) large and oval obturator foramen
- d) Presence of pre-auricular sulcus

Q80. A pilot is suffering from coronary artery disease. During routine examination his doctor finds the defect and asks him to not fly as it may precipitate myocardial infarction during flight. The pilot requests the doctor to maintain his professional secrecy and not to tell his condition to the authorities. The doctor still tells the condition to the authorities, and the pilot is grounded. This is an example of?

- a) Therapeutic privilege
- b) Patient autonomy

MIST- MEDICAL INSTITUTE FOR SCREENING TEST
